

Axzon and SensThys Introduce Wireless/Battery-free Automotive Leak Detection Program.

Solution Solves Water Leak Inspection Challenges on Vehicle Assembly Lines

Austin, TX – October XX, 2022 – Axzon, a developer of battery-free RFID wireless sensors, and SensThys a provider of services and solutions that seamlessly integrate varied sensors with integrated security and data protection technologies, introduce a program to facilitate automotive suppliers implement next generation leak detection on their production lines.

Water Intrusion is Costly – Recalls, Repairs, Brand Reputation

“Water Leaks” have plagued the auto industry for years. About 3% of new vehicles leave the factory with leaks large enough to cause mold growth and damage to expensive electronic components. Detecting assembly issues and the leaks they trigger before a vehicle leaves the factory is critical to improving outgoing quality and avoiding customer warranty issues which lead to costly recalls.

Automakers Turn Up the Pressure to FindLeaks with Water Jets in the 2,000 psi Range

The “QCLEak Proof-of-Concept Program” offers automotive companies a one-stop proof-of-concept including hardware, sensor, software and services to bootstrap in-house teams to use the latest in wireless/battery-free passive leak sensors. The program implements an on-site proof-of-concept supported by guaranteed hardware availability, software tools, passive sensors, and onsite implementation by the SensThys team.

Deliverables from the program include the completion of the onsite proof-of-concept, definition of final implementation and supporting material for management ready sign-off based on the working prototype.

The program includes:

- RFID **hardware**
- Leak detection and verification **software**
- 200 AXN3110 passive **leak detection sensors**
- All software licenses for **6-month evaluation**
- 2-day **on-site** prototype preparation (US Only)
- **Guaranteed** hardware availability
- Hardware “**hot swap**” to guarantee progress
- 6-months of **support**

Catching leaks at the factory requires a new approach to leak detection. Since getting to the leak areas is challenging, what’s needed are water sensors located in these locations, under the carpet, and in the thin spaces between plastic panels and door moldings.

Axzon’s thin, unobtrusive moisture sensors are placed where the water pools without affecting or displacing other components or trim pieces and work seamlessly together with the SensThys handheld reader and leak-detection software to interrogate the sensors and then interpret that sensor data to determine if leaks occurred and remedial work on the vehicle is required.

About Axzon

Based in Austin, Texas, Axzon (formerly RFMicron, Inc) Axzon's sensors are used to wirelessly monitor temperatures and moisture levels without the need for external power making them ideal solutions for multiple applications. These RFID battery-free wireless sensors generate highly valuable data that Axzon's encryption technology protects users' data by guaranteeing secure communication between Axzon sensors and authenticated readers while ensuring the integrity of the data.

Since its founding in 2006, Axzon has led the expansion of sensing capabilities to meet the unique, large-scale demands of businesses whose success depends on knowing more about their operating conditions, including automotive manufacturing, healthcare, predictive maintenance, switchgear, cold-chain and data centers. Axzon's solutions include wireless Smart Passive Sensors™, and other patented and patent-pending industrial IoT solutions.

About SensThys www.sensthys.com

SensThys specializes in bringing innovation to established technologies to solve high-value problems. We focus on reducing complexity, increasing reliability, and making technology easier to use. SensThys combines a highly technical and innovative US team with Foxconn supply-chain and public/private

leadership to provide thoughtful sensor implementations and simple to use identification solutions. We provide hardware, software, systems or the skillset to make these happen.
