

CEO Note: Customer Driven Software Tweaks and Tucks!

A Series of Messages from our CEO... Jo Major

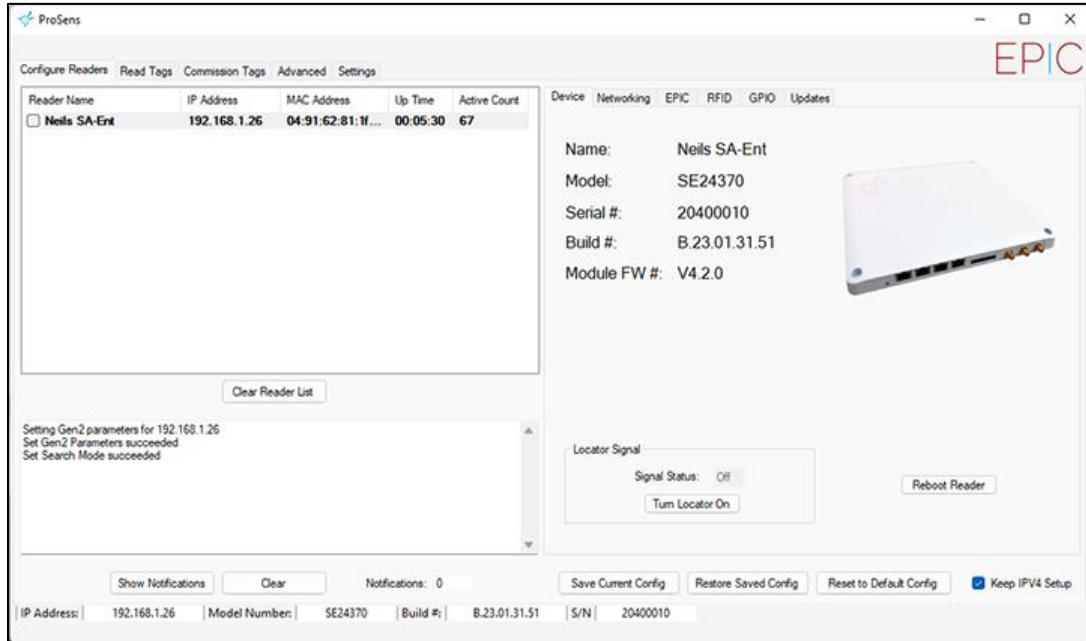

Customer driven software update news for you. Here are the highlights.

ProSens

RFID Reader Management and Tag Read Console improvements include:

- Network setting are retained when a group of readers are reset
- Enhanced security using port 5080.
- Status and control of AutoSens operation
- Usability improvements in GUI
- Note - these changes require the reader firmware update

PhySens

Windows Sensor Tag Interrogation and Graphing improvements:

- Improved Axzon sensor tag speed and accuracy
- Display option for Fahrenheit or Centigrade.
- User Interface enhancements, such as color-coding reader status
- Enhanced graphics scaling
- Resin infusion event status detection (beta)

Core/Enterprise Reader Firmware

- AutoSens network traffic optimizations
- Better start/stop and override control of AutoSens
- Option for full reader reset or preserve network settings on reset.
- GPIO capability improvements during inventory
